

Harshavardhan A G (Harsha)

Montreal, Canada | +1 438-535-5782 | agharsha.anbu@gmail.com | github.com/Harsha-anbu-g | harshavardhanag.com

Summary

Software developer with 4 years of work experience building web apps and cloud services end to end, from features to test automation and DevOps. Built Towinly, an elder safety platform, solo, with a 129-endpoint Java 21 and Spring Boot backend, 1,006 automated tests, and a React Native iOS app in TestFlight. Shipped a cache-aside Redis layer in Java on a live ad-serving path. Uses Claude Code with custom MCP servers and Copilot daily.

Technical Skills

AI & Tooling: Claude Code, Custom MCP Servers (MCP), Agentic Workflows, GitHub Copilot, AI-Assisted Development

Languages: Java, Go, Kotlin, C#, JavaScript, TypeScript, SQL, Shell Scripting

Backend & Frontend: Spring Boot, Spring Data JPA, Hibernate, RESTful APIs, GraphQL, Microservices, React, React Native

Databases & Caching: PostgreSQL, MySQL, SQL Server, Oracle, Redis

Cloud & DevOps: AWS (EC2, S3, IAM), GCP (Cloud Run), Azure, Linux, Docker, Kubernetes, Jenkins, CI/CD Pipelines, GitHub Actions, Git

Security & Testing: OAuth2, JWT, RBAC, OWASP Top 10, Spring Security, SonarQube, Snyk, Test Automation (JUnit, Mockito)

Practices: Agile/Scrum, SDLC, Design Patterns, Requirements Gathering, Code Review, Technical Documentation, Production Troubleshooting

Work Experience

Backend Developer

Apr 2026 - Sep 2026

Vosyn

Canada

- Owned an ad decision microservice's caching from requirement to production, measured by ad decisions kept off a database round trip and a 60-second staleness ceiling, by designing dual-invalidation cache-aside Redis caches in Java and Spring Boot on GCP Cloud Run.
- Hardened a real-time watch-party feature before release, measured by 8 defects closed and a 126/126 suite restored from 6 never-failing tests, by verifying an untested Java branch at three privilege levels and closing an unguarded HTTP PUT method.
- Verified the merged release branch safe to ship, measured by a 383-test Java backend suite green, 30 more live checks at 0 failures, and 0 commits lost, by tracing two release-blocking startup failures to root cause, one a dropped import failing 68 tests, and fixing both.

Data Assurance Analyst

Dec 2023 - Feb 2024

Ernst & Young (EY)

Chennai, India

- Flagged weekend postings, round amounts, and manual entries for audit review, measured by client datasets of 10 million rows or more at banks and financial-services firms, by writing and optimizing SQL Server queries over journal entries and general ledger rows.

Full Stack Application Developer

Jan 2021 - Aug 2023

Ideal Corporate Services

Chennai, India

- Turned client requirements into REST APIs that outside teams called, measured by 5–10 production sites over MySQL, PostgreSQL, and Oracle with callers kept working through every change, by documenting each API contract in Java and Spring Boot.
- Stopped a live client site from stalling under load, measured by garbage-collection pauses of over 5 seconds cleared on a WebLogic application serving over 10,000 requests a day, by profiling the running JVM to find the objects being retained and fixing them in the middle layer.
- Released client changes on a controlled cadence, measured by 2–4 releases a month, each QA-tested, signed off, and rolled back when one broke, by running Jenkins test jobs before deploys to Linux, Azure, and Kubernetes and writing a runbook.

Projects

Towinly | Elder Safety and Trust-Based Social Platform (Solo Project)

Mar 2026 - Present

Java 21, Spring Boot, PostgreSQL, React 19, React Native, AWS, Vercel, Railway, Docker towinly.com | github.com/Harsha-anbu-g/Towinly

- Built and deployed a full stack platform for older adults and nearby helpers, solo, measured by 129 OpenAPI-documented REST endpoints, 59 Flyway migrations, and 43 indexes over 879 commits, by owning every design call in Java 21, Spring Boot 3.5, and PostgreSQL.
- Shipped a React Native, Expo, and TypeScript iOS app to TestFlight on the same backend, measured by 54 screens, 1,396 Jest tests, and 397 commits, by enrolling in the Apple Developer Program, signing EAS builds, and sending Expo push notifications from Spring Boot.
- Secured the API, measured by a 7-stage consent ladder, 7 rate limiters, and 3 findings closed (lockout, enumeration, demo exposure), by building Spring Security with JWT, OAuth 2.0 login, RBAC, AES-GCM sealed letters, and server-side blocking.
- Cut 90 vulnerable dependency paths, 6 critical and 46 high, to 0 and grew the suite to 1,006 JUnit 5 and Mockito tests, measured by clean SonarQube and Snyk reports and a green run on every push, by wiring both scanners into GitHub Actions.
- Designed a custom AI-accelerated workflow using Claude Code with reusable skills, sub-agents, and custom MCP servers, measured by scaffolding, JPA mapping, and test generation automated across 20 modules, by reviewing code with AI daily.

Education

Concordia University, Montreal, Canada

Jan 2025 - Aug 2026

Master's in Applied Computer Science

- Relevant Coursework: Distributed System Design, Advanced Programming Practices, Algorithm Design Techniques, Applied Artificial Intelligence, Software Project Management, Programming and Problem Solving

Certifications

AWS Certified Developer – Associate

Interests

Building Towinly (my own app), Reading Books and Experimenting with What I Read, Journaling, Chess, Badminton, Meditation, Travelling
