SUMMARY

Software developer with **3 years** of experience building web apps and cloud services end to end, from user-facing features through test automation and DevOps. Shipped an **83-endpoint Java 21** and **Spring Boot** backend with **255** automated tests, and a **cache-aside Redis** layer on a live ad-serving path. Uses AI coding tools daily, including **Claude Code** with **custom MCP servers** and Copilot.

EDUCATION

Master's in Applied Computer Science | *Concordia University, Montreal, Canada*

Jan. 2025 – Aug. 2026

- Relevant Coursework: Distributed System Design, Advanced Programming Practices, Algorithm Design Techniques, Applied Artificial Intelligence, Software Project Management, Programming and Problem Solving

PROJECTS

ToWin | *Java 21, Spring Boot, Kafka, Redis, AWS, Docker, React, Claude Code, MCP* Mar. 2026 – Present

Elder Safety and Trust-Based Social Platform | 🐙 [GitHub](#) | 🌐 [Live Website](#) |

- Architected an event-driven backend, measured by **83 REST endpoints** across **18 controllers**, **14 JPA entities**, and **36 Flyway migrations** across **171 Java files** and **722 commits**, by owning every decision in **Java 21**, **Spring Boot**, and **Kafka**.
- Designed a custom AI-accelerated workflow using **Claude Code** with sub-agents, **custom MCP servers**, and tailored Skills, measured by scaffolding, JPA mapping, and test generation automated across **16 modules**, by reviewing code with AI daily.
- Kept a solo build safe to refactor, measured by **255 JUnit and Mockito tests** across **38 test classes** gating every push, by generating tests through AI sub-agents and running SonarQube and Snyk scans in **GitHub Actions** against OWASP Top 10.
- Owned the stack end to end, measured by a **7-stage** mutual-consent trust flow, PostgreSQL tuned with **18 indexes**, and **4** rate limiters, by building **cache-aside Redis** discovery (**5-minute TTL**), Spring Security (OAuth2, JWT, RBAC), and **Docker** Compose.

EXPERIENCE

Backend Developer | *Vosyn, Canada*

Apr. 2026 – Jul. 2026

- Shipped backend work on VosynEnterprise's ad-serving path, measured by delivery inside a **Scrum** pod against a monetization initiative tracked as a company-wide **C-suite OKR**, by building with **FastAPI** and **Django** on the pod that owns ad delivery.
- Unlocked local development on an unfamiliar multi-service platform, measured by **3** backing services (PostgreSQL, **Redis**, **Kafka**) verified running together end to end, by validating the Dockerfile base image and configuring **Docker** Compose from a single env file.
- Kept ad decisions off a database round trip on every call, measured by a **60-second** ceiling on stale campaign data through dual invalidation, by building two **cache-aside Redis** caches, one for active campaigns and one for creative metadata, each with a defined key schema, database loader, and startup warm-load, fronting an independently scalable ad-decision **microservice** on GCP Cloud Run.

Data Assurance Analyst | *Ernst & Young (EY), Chennai, India*

Dec. 2023 – Feb. 2024

- Improved financial assessment accuracy for senior Chartered Accountants at a Big Four firm, measured by audit reports for **2–3 client companies per day** and **several hours** saved weekly, by optimizing SQL and streamlining workflows with Alteryx.

Full Stack Developer | *Ideal Corporate Services, Chennai, India*

Jan. 2021 – Aug. 2023

- Designed and built the backend for client websites across education, healthcare, government, and real estate, including a Tamil Nadu government portal (TNPCB), measured by **5–10** sites in production through 2023, by defining the REST API structure in **Java** and **Spring Boot**, the relational schema in MySQL or PostgreSQL, and MongoDB for select non-relational use cases.
- Designed the caching that kept high-traffic client pages responsive, measured by a **100-product** e-commerce catalog staying stable through sale-day traffic spikes, by keying **Redis** entries per day and resource so appointment-availability checks stopped hitting the database on every request, caching full listing and category pages, and removing an N+1 query pattern.
- Kept the client portfolio healthy in production, measured by **5–15** bug tickets resolved a month through QA and client escalation channels, by diagnosing and fixing backend issues across the portfolio's Spring Boot services and SQL queries.

TECHNICAL SKILLS

AI & Tooling: Claude Code, Claude Sub-Agents, Agentic Workflows, Custom MCP Servers (MCP), GitHub Copilot, LLMs for Code Generation and Review, AI-Assisted Development, Prompt Engineering, Computer Vision (PyTorch, InsightFace)

Languages: Java, Go, Kotlin, C#, JavaScript, TypeScript, C++, SQL, Shell Scripting

Backend & Frontend: Spring Boot, Spring Data JPA, Hibernate, Node.js, FastAPI, Django, RESTful APIs, GraphQL, Microservices, WebSocket, Concurrent Programming, Maven, React, Redux, AJAX

Databases & Messaging: PostgreSQL, MySQL, MongoDB, MS SQL Server, Redis, Memcached, DynamoDB, Apache Kafka, Flyway

Cloud & DevOps: AWS (EC2, S3, IAM, CloudFront), GCP (Cloud Run), Azure, Linux, Docker, Kubernetes, Ansible, CI/CD Pipelines, GitHub Actions, Git, SRE and DevOps Practices, Zero-Downtime Deployments

Web & Monitoring: TCP/IP, HTTP, Load Balancing, CDNs (Akamai, CloudFront), Elasticsearch, Kibana, Dynatrace

Security & Testing: SSL/TLS, OAuth2, OpenID Connect (OIDC), JWT, RBAC, OWASP Top 10 (XSS, CSRF), Spring Security, SonarQube, Snyk, Test Automation (JUnit, Mockito, Selenium)

Spoken Languages: English (professional), French (beginner, enrolled in Québec government francisation program)

CERTIFICATIONS

AWS Certified Developer – Associate | 🐙 [Verify on Credly](#)
